SEA2BEE II
Sustainable Blue Economy Business Ecosystem for Entrepreneurship and Innovation in Algarve

Further sustainable development and blue economy can only take place if we are able to protect our ocean and coastal resources. Sea2Bee II is a project that aims to support the development of a sustainable blue economy business ecosystem in the Algarve region, by fostering entrepreneurship and innovation.

Sea2Bee II is also PROTAGONISTA in the Algarve!

Will the year coming to a close, Sea2Bee II associates progress and shapes what's coming next

As the project reaches its midpoint, Sea2Bee II partners continue to strengthen the blue economy ecosystem in the Algarve region, fostering collaboration, innovation, and sustainable growth. Over the past months, the consortium has been actively engaged in a series of key activities, including the design study for a network of Blue Hubs.

The project has also launched its first open call for innovation projects, aimed at supporting startups and SMEs developing solutions for the blue economy. Additionally, Sea2Bee II has been present at several events, including the Algarve Tourism Fair, the Portugal Ocean Summit, and the Blue Economy Forum, where partners engaged with stakeholders and showcased the project's progress.

Looking ahead, the consortium is preparing for the second open call, the launch of the Blue Hubs, and the upcoming Sea2Bee II Conference in November 2025. These activities will further support the development of a thriving blue economy ecosystem in the Algarve.

WHAT WE HAVE BEEN UP TO

THE TIME HAVING BY: BLUEHUB HUBS IN ALGARVE

With the creation of the Blue Economy Business Ecosystem in the Algarve, Sea2Bee II aims to support the development of a network of Blue Hubs in the region. These hubs will serve as key centers for innovation, collaboration, and entrepreneurship, fostering the growth of sustainable blue economy businesses. The consortium is currently in the process of identifying potential locations for the hubs and assessing their feasibility.

To carry out this study, the consortium has developed a questionnaire to collect data on existing infrastructure, resources, and stakeholder needs. The questionnaire is now open and will remain available until 30 November 2025. We encourage all relevant stakeholders to participate and help shape the future of the blue economy in the Algarve.

What's new in this edition?

- Blue Hubs study: Algarve's blue economy ecosystem
- Open call launched: startups and SMEs invited to apply
- Event marathon at Sea2Bee II Forum: empowering the blue economy through collaboration and innovation

Have a question or an submit@sea2bee.eu to the editorial team.

Here's a quick look the highlights from our sea2bee.eu website.

Welcome to Sea2Bee II Training Programme

The Sea2Bee II Training Programme is now live! Designed to support the development of sustainable blue economy businesses in the Algarve, the programme offers a series of free training sessions for entrepreneurs, startups, and SMEs. Each session will focus on specific topics related to the blue economy, including sustainable tourism, marine biotechnology, and circular economy practices.

The programme is open to participants from all backgrounds and aims to foster collaboration and innovation among attendees. Registration is now open, and we encourage all interested parties to sign up early, as spaces are limited. Don't miss this opportunity to enhance your skills and contribute to the growth of the blue economy in the Algarve.

Training Session Review: Lessons from Three Small-Scale Fisheries Projects

On September 17th, we hosted a training session to share lessons learned from three small-scale fisheries projects in the Algarve. The session brought together fishers, researchers, and stakeholders to discuss practical challenges and solutions in implementing sustainable fishing practices. The projects presented included efforts to reduce bycatch, improve gear selectivity, and engage the local fishing community in data collection. The discussions highlighted the importance of collaboration between scientists and fishers for the success of these initiatives.

SEA2BEE Traceability Platform demonstrated for the artisanal octopus fishery on case

Traceability is a key component of sustainable fisheries management and consumer confidence. In the Algarve, the octopus fishery is a traditional and economically important activity, but it faces challenges related to illegal, unreported, and unregulated (IUU) fishing. To address these issues, the SEA2BEE project has developed a traceability platform specifically for the artisanal octopus fishery on case.

BLUEBEE: Here Are Five Good Reasons To Succeed In Seafood Traceability

Seafood fraud is a significant problem in the industry, with an estimated 20% of seafood products being mislabeled or misrepresented. This can have serious consequences for consumers, who may be unknowingly purchasing products that are not what they think they are, and for the environment, as it can lead to overfishing and the depletion of fish stocks. Traceability is a key tool in addressing this issue, as it allows for the tracking of seafood products from the point of harvest to the point of sale, ensuring that they are accurately labeled and that their origin is known.

Pioneering the Science of the Algarve: A Tribute to Professor Ricardo Serrão Santos

Professor Ricardo Serrão Santos, a renowned marine biologist and conservationist, has been a pioneer in the study of the Algarve's marine ecosystems. His work has focused on the region's unique biodiversity, including its rich fish populations, seabird colonies, and marine habitats. Professor Serrão Santos has been instrumental in establishing the Algarve as a hub for marine research and conservation, and his legacy will continue to inspire generations of scientists and conservationists.
